**Abstract**

The chapter discusses how the changes on the horizon are less associated with technology than basic human values. When all the knowledge in the world is free and easily accessible, technology is not going to save the university. Instead, technology will play a role in ensuring that the modern university can monetise the forthcoming changes. The chapter suggests positivity, generosity, empathy, connectivity, and curiosity to be the core principles of the university of the future. The university of the future will move from a gatekeeper of knowledge and prestige to a facilitator of learning. This will occur in ways that are both technological (badges replacing diplomas) and philosophical (how to learn replacing transfer of knowledge). This will benefit how people get hired and change why they get hired. These changes are already happening today with leading companies around the world removing the requirement to possess a degree. Aptitude and adaptability will become measurable, thanks to technology. The only thing certain in the future is that change will be
