Abstract

While a class gap remains in obtaining a degree despite an expansion of higher education, a variety of second chances have become available. How class matters in receiving parental assistance for seeking a second chance is of increasing importance to understanding educational inequality in an altered context of higher education, but it is under-researched. This article seeks to fill this gap by referring to a qualitative study of 85 community-college students in Hong Kong for illustration. First interviews with respondents recruited from a community college were conducted between the year 2006 and 2009 where they discussed how they desired a second chance option by studying an associate degree in community college. Encouragement and emotional support to seek this new, costly, and risky second chance was provided by parents of most respondents. And yet, as a deficit approach would have us believe, middle-class respondents received more relevant information and academic advice with financial support from their parents than working-class respondents. In spite of that fact, it seems

13.12.2025

to remain whether the middle class are indeed better able than the working class to get transferred to university through the transfer of an associate degree in Hong Kong. This illustration suggests that the availability of a second chance does not immediately imply that the middle and the working classes are equally capable of taking advantage of it to rectify their previous educational failure. This article will be concluded by discussing the implications of this study for educational inequality. (HRK / Abstract übernommen) Wong, Yi-Lee, E-Mail: yi-lee.wong@graduate.khu.hk
