Abstract

In this paper, I offer a personal account of a journey through a world of science governance that is in flux. I reflect on three levels of experimentation: first, the intermingling of social scientists with scientists and policymakers; second, the creation of new forms of public dialogue; and third, the blurring of technical and social experiment with geoengineering as a case in point. My conclusion is that social scientists can both gain and contribute a great deal through engaging with, questioning and trying to open up such experiments. HRK / Abstract übernommen)
