**Abstract**

This study examines the perceived employability of facultative domestic and international business internships, using an experimental between-subject factorial design. A sample of 194 Portuguese business employees rated the employability of six fictitious rÃ©sumÃ©s of business graduates varying in gender and participation in a facultative internship. The rÃ©sumÃ©s were target to an entry-level marketing position and were rated on a set of employability outcomes, such as job suitability, employability skills and starting salary. The results showed that the non-participation condition resulted in the worst rates of job suitability and employability skills, while the outcomes of the international and the domestic conditions were not significantly different from each other. Male interns were the most well ranked in job suitability and starting salary, while female non-interns were the worst ranked. This study provides evidence that an internship experience, even if facultative, is an information â€œgood to addâ€™ in the rÃ©sumÃ© but does not support the prediction that â€œthe more international the betterâ€™. This evidence suggests that graduatesâ€™ employability depends

not only on the academic credentials and skills they can bring to the labour market as on the expectations about their unique contribution. This study is one of the first to empirically examine the perceived employability of facultative business internships, exploring the relevance and value of domestic and international experiences.
