Abstract

The provision of health education in a distance mode is very much a new approach in Bangladesh. Health education has been identified as an important means for ensuring the health and hygienic consciousness of all citizens. Limitations of infrastructure and resource personnel are important problems for such educational programmes. This article focuses on two programmes, a Bachelor in Nursing programme and a Certificate in Primary Health Care programme, that were developed and implemented by the Bangladesh Open University (BOU) through a distance-mode module. The use of electronic media delivery and the development of the continuing and extension health education offerings in distance mode have been successful. They provide access to global networking and to information on educational systems. (HRK / Abstract übernommen) Numan, Sharker Md., E-Mail: numan@dhaka.agni.com
