## **Abstract**

Many organizations around the world engage in training aimed at professionalizing higher education management and leadership, specifically in relation to development cooperation efforts. The German Academic Exchange Service (DAAD) and the German Rectors' Conference (HRK) are active in this area and commissioned the present background study to gain insight into the state of play with regard to such training schemes across the globe. Conducted by the Boston College Center for International Higher Education, this study aims to provide an overall picture of the different actors and programs currently in evidence, and to identify future directions and evolving aspects of this work. Ultimately, an enhanced understanding of the many organizations involved in the design and delivery of such schemes, and of their varied approaches, may enable the exchange of experience and good practice among relevant actors worldwide.
